

Who's There? New Iberia Research Center

A listing of 352 chimpanzees held at New Iberia Research Center -- separated by decade of birth. As of 2008, the current population estimate is 325.

(Data sources: Originally obtained by Stop Experimentation on & Exploitation of Chimpanzees (SEEC) on April 20, 2002. Chimpanzee data on the gray background reflects the breeding colony at NIRC as provided by the National Institutes of Health (NIH) in January 2006. Recent updates about released chimpanzees are from a 2008 FOIA request to NIH.)

An inquiry was sent to New Iberia on 11/14/08 requesting the names and other identifying information for chimpanzees at this facility. Our letter was refused and returned back to us unopened on 12/10/08.

NOTE: Chimpanzees that are part of NIRC's breeding colony are indicated in light gray. The actual birth date of domestic born chimpanzees (D) is shown, while that of wild caught (W) chimpanzees is estimated to be January 1st. The breeding status assigned by NIRC is indicated in the notes column. We have no further information.

NIRC's KEY: Potential Breeder Replacement (PBR), Proven Breeder (PB), Program Potential (PP), Non-Breeder (N), Currently Assigned, (CA).

NIRC holds 46 chimpanzees born prior to the 1975 ban on capturing free-living chimpanzees in Africa, indicating that some may have been captured from the wild as infants. NIRC has the largest number of chimpanzees born before 1970 (38 chimps). Of the current population - that we know of - there are 35 elder females and 41 elder males.

Chimpanzees are considered elderly beginning at 25 years for males (DOB 1984 or earlier) and 30 years for females (DOB 1979 or earlier).*

If you have current or historic information on the chimpanzees held at this facility, please email releasechimps@neavs.org.
