Inspection
Type: ROUTINE INSPECTION
Date: JUL-19-2005

All redactions on this page are pursuant to (b)(6) & (b)(7)(c).

**3.80 (b)(2)(i)
PRIMARY ENCLOSURES.**

The minimum space that must be provided to each non-human primate, whether individually or group housed, will be determined by the typical weight of animals of its species:

25 adult chimps housed in various groups in room 100 of Building 10. Cages provide 43 square feet of floor space and are non compliant if 2 or more chimps housed in enclosure.

28 adult chimps housed in various sized enclosures in room 200 of Building 10. Floor space is adequate but vertical space is 83 instead of 84 inches high.

These non compliances have not been corrected since last inspection but presently have an approved extension until August 26, 2005 for correction. Correction procedures involve building of primadomes and planned relocations of some of these affected chimps to a sanctuary. Primadome construction is at least 75% complete. Upon primadome completion these chimps will be moved to compliant housing.

This inspection was conducted July 18 & 19, 2005. Supervisory Animal Care Specialist Dr. Daniel Jones and [redacted] [redacted] either accompanied us or provided information relative to this inspection.
