

Who's There? Primate Foundation of Arizona (PFA)

A listing of 77 chimpanzees held at PFA – separated by decade of birth.

The current population is 7, according to the facility's June 2009 update on the Primate Info Net* website.

(Data source: originally obtained by Stop Experimentation on & Exploitation of Chimpanzees (SEEC) as of June 7, 2001; PFA reported a total of 73 in 2005. In 2006, PFA announced that it has transferred ownership of the chimpanzees to the federal government and will be sending nearly all of its chimpanzees to the MD Anderson Cancer Center by 2010. A Freedom of Information Act request was sent to NIH and PFA on 8/16/05 requesting the names and other identifying information for federally supported chimpanzees. NIH's response was to contact the facility itself. PFA's response on August 23, 2005 refused to provide information on the grounds that it is a privately owned facility. According to FOIA documents received on 9/18/09, 65 chimpanzees have already been transferred to MD Anderson.)

PFA currently holds one chimpanzee born prior to the 1975 ban on capturing free-living chimpanzees in Africa, indicating that he may have been captured from the wild as an infant. Of the current population, there are two elder females and one elder male.

Chimpanzees are considered elderly beginning at 25 years for males (DOB 1984 or earlier) and 30 years for females (DOB 1979 or earlier).**

If you have current or historic information on the chimpanzees held at this facility, please email releasechimps@neavs.org.
