

Who's There? Southwest National Primate Research Center

A listing of 250 chimpanzees held at Southwest -- separated by decade of birth. The current population is 166, according to Dr. John L. VandeBerg at the International Primatological Society Congress in August 2008.

(Data source: Originally gathered by Stop Experimentation on & Exploitation of Chimpanzees (SEEC) in 2001. Information obtained from the National Institutes of Health (NIH) reported a total of 233 chimpanzees at this facility in 2002.)

A FOIA inquiry was sent on 11/14/08 requesting the names and other identifying information for chimpanzees at this facility. Southwest responded on 11/21/08 by refusing to provide information on the grounds that it is a privately owned facility. FOIA documents received from NIH listed 31 chimpanzees transferred to Chimp Haven in 2007; only their ID numbers were listed.

Since these records are incomplete, it is impossible to know if any chimpanzees were born after the 1995 voluntary federal breeding moratorium. Of the current population - that we know of - there are three elder females and nine elder males.

Chimpanzees are considered elderly beginning at 25 years for males (DOB 1984 or earlier) and 30 years for females (DOB 1979 or earlier).*

If you have current or historic information on the chimpanzees held at this facility, please email releasechimps@neavs.org.
